1. Introduction to Oracle Integration Gen 3

Oracle Integration 3 (OIC 3) is Oracle's latest-generation managed iPaaS (Integration Platform as a Service) on Oracle Cloud Infrastructure. It provides a comprehensive platform for integrating cloud and on-premises applications, automating business processes, building visual applications, and exposing/consuming APIs — all through a visual, low-code development experience with hundreds of prebuilt adapters.

Key Capabilities

- **Application Integration** – Design integrations using a visual canvas with prebuilt adapters for Oracle and third-party apps.
- **Process Automation** – Build structured and dynamic business process applications with human tasks and approvals.
- **Visual Builder** – Develop web and mobile applications with integrated Visual Builder functionality.
- **File Server (SFTP)** – Store and retrieve files using the embedded SFTP-compliant file server.
- **B2B Integration** – Automate e-commerce document exchange (EDI) with trading partners.
- **Robotic Process Automation (RPA)** – Automate UI-based tasks for applications without APIs.
- **Agentic AI** – Build and run AI agents to automate complex workflows with human-in-the-loop approval.
- **Decisions** – Define business rules to automate decision-making within integrations.
- **Rapid Adapter Builder** – Build custom adapters for third-party REST APIs.

Gen 3 vs Gen 2 Highlights

Feature	Gen 2	Gen 3
User Interface	Blue theme	Redwood-inspired UI
Organization	Flat structure	Projects with RBAC
REST/SOAP Payload	10 MB	100 MB
Retention Period	Up to 30 days	Up to 32 days
Tracing Levels	Single level	Debug / Audit / Production
RPA	Not available	Built-in RPA
AI Features	Not available	AI-driven mapping, agents, NLP
Disaster Recovery	Manual DR	Oracle Managed DR
Private Endpoints	Connectivity Agent	Native adapter + Agent

■ **Tip:** OIC 3 is available in **Standard** and **Enterprise** editions. Enterprise includes Process Automation, Visual Builder, B2B, RPA, and advanced adapters. Check your license to understand which features are available.

2. Prerequisites

Before starting your OIC 3 learning journey, ensure you have the following foundational knowledge:

- **Web Services** – Basic understanding of REST, SOAP, WSDL, JSON, and XML.
- **Oracle Cloud Infrastructure (OCI)** – Familiarity with OCI console, compartments, and identity management.
- **Oracle Cloud Account** – Free tier available for hands-on practice and provisioning.
- **SQL & Database Concepts** – Basic SQL queries and understanding of relational databases.
- **Integration Patterns** – Awareness of point-to-point, pub-sub, and orchestration patterns.
- **Oracle Fusion Cloud (optional)** – Familiarity with ERP/HCM Cloud is helpful but not required.
- **XML/XSLT (optional)** – Useful for data transformation tasks within integrations.

■ **Tip:** *If you're new to integration concepts, start with BEENUM LEARNING beginner courses on Udemy to build a solid foundation before diving into OIC 3.*

3. Phase 1: Foundation (Weeks 1–3)

■■ PHASE 1: FOUNDATION • Weeks 1–3

Learning Objectives

- Set up an OCI account and provision an Oracle Integration 3 instance.
- Navigate the **Redwood-inspired** OIC 3 user interface.
- Understand core terminology: **Projects, Integrations, Connections, Lookups, Libraries, Adapters.**
- Create your first **App-Driven Orchestration** integration.
- Create your first **Scheduled Orchestration** integration.
- Configure **REST** and **SOAP** connections and adapters (trigger & invoke).
- Activate, deactivate, clone, export, and import integrations.
- Understand integration patterns: **App-Driven, Scheduled, Publish/Subscribe.**
- Understand OIC 3 editions, license types, and message packs.

Hands-On Activities

- Build a "Hello World" integration using the REST adapter.
- Create a REST-triggered integration that fetches weather data from an external API.
- Practice integration lifecycle: create → activate → test → deactivate → export → import.

Resources

- [BEENUM LEARNING – YouTube](#)
- docs.oracle.com/en/cloud/paas/application-integration/

4. Phase 2: Intermediate (Weeks 4–7)

■ ■ PHASE 2: INTERMEDIATE • Weeks 4–7

Learning Objectives

- Master the **OIC Data Mapper** for payload transformations and XSLT.
- Work with **Lookups** for reference data mapping between systems.
- Create and use custom **JavaScript Libraries** within integrations.
- Configure **Orchestration Flow Actions**: Switch, For-Each, Scope, Assign, Stage File, etc.
- Implement **File Handling** using the FTP adapter, File Server, and stage file actions.
- Build **Scheduled integrations** with parameters and iCal expressions.
- Use the **Fault Handling Framework** for error management and retry logic.
- Configure the **Connectivity Agent** for on-premises system connectivity.
- Work with the **Database (ATP) adapter** for database operations.
- Convert scheduled integrations to app-driven integrations.

Hands-On Activities

- Build a file-based integration: read CSV from File Server, transform, and write to database.
- Implement error handling and fault recovery with re-throw and global fault handlers.
- Connect to an on-premises database via the Connectivity Agent.
- Create scheduled integrations with parameterized runs and iCal schedules.

- docs.oracle.com/en/cloud/paas/application-integration/training.html

5. Phase 3: Advanced (Weeks 8–11)

■ PHASE 3: ADVANCED • Weeks 8–11

Learning Objectives

- Integrate with **Oracle ERP Cloud**: FBDI import, BIP reports, business events, bulk extract, business services.
- Integrate with **Oracle HCM Cloud**: HDL imports, bulk data, directory synchronization.
- Master the **Oracle ERP Cloud adapter** use cases and configuration.
- Implement **B2B integrations** with trading partners using EDI documents.
- Use the **Event Framework** (pub-sub pattern) within Projects for decoupled architectures.
- Build and manage **Projects with RBAC** for team-based development.
- Configure **tracing levels**: Debug, Audit, and Production for observability.
- Master **monitoring, observability, and troubleshooting** of integration instances.
- Use **Recipes and Accelerators** for rapid development of common patterns.
- Understand the **Design-Time Dependency View** for visualizing integration relationships.

Hands-On Activities

- Build an ERP Cloud FBDI import integration for bulk invoice or journal creation.
- Create a BIP report extraction integration with scheduled delivery.
- Implement a B2B integration for EDI document exchange with a trading partner.
- Set up event-driven integrations using the pub-sub model within a Project.

6. Phase 4: Process Automation, RPA & AI (Weeks 12–15)

■ PHASE 4: PROCESS AUTOMATION, RPA & AI • Weeks 12–15

Learning Objectives

- Introduction to **OCI Process Automation** within OIC 3.
- Build **structured and dynamic process applications** with forms and workflows.
- Create **human tasks and approval workflows** for business processes.
- Introduction to **Robotic Process Automation (RPA)** in OIC 3.
- Build and deploy your first **robot** for UI-based automation.
- Use **Decisions** to automate business rule logic within integrations.
- Leverage **AI features**: natural language integration creation, AI-driven data mapping, document understanding.
- Build and run **AI agents** (Agentic AI) with human-in-the-loop approval.
- Use the **Rapid Adapter Builder** to create custom adapters for third-party REST APIs.
- Orchestrate **robots, decisions, and integrations** as a unified automation solution.

Hands-On Activities

- Build a process application with human approval tasks for expense requests.
- Create an RPA robot for automating UI-based data entry tasks.
- Implement a Decision component for automated business rule evaluation.
- Enable and test AI features: natural language integration creation and AI-driven mapping.

7. Certification Path

Oracle offers an official certification to validate your expertise in Oracle Integration Cloud.

OCI 2025 Application Integration Professional

Exam Code: **1Z0-1042-25** (retiring May 29, 2026; replaced by the 2026 version in June 2026)

This certification validates your ability to design, implement, and manage application integrations across cloud and on-premises environments using Oracle Integration Cloud.

Detail	Value
Exam Code	1Z0-1042-25
Format	Multiple Choice
Number of Questions	50
Duration	90 Minutes
Passing Score	68%
Price	USD \$245

Exam Topic Weightings

Exam Topic	Weighting
Getting Started with OIC Integrations	18%
Using OIC Connections & Adapters	21%
Creating Orchestrated Integrations	40%
Creating Scheduled Integrations	11%
Testing, Monitoring & Troubleshooting	16%

■ docs.oracle.com/en/cloud/paas/application-integration/training.html – Official Training Hub

■ **Tip:** Focus heavily on **Creating Orchestrated Integrations** – it accounts for **40%** of the exam. Master the Data Mapper, fault handling, JavaScript libraries, and orchestration actions.

8. Recommended Resources

■ Learning Courses

- **BEENUM LEARNING – Udemy** – Comprehensive Oracle Integration Cloud courses covering beginner to advanced topics.
- **BEENUM LEARNING – YouTube** – Free tutorials, walkthroughs, tips, and real-world integration demonstrations.

■ Official Oracle Documentation

- docs.oracle.com/en/cloud/paas/application-integration/ – Main documentation and getting started guides.
- docs.oracle.com/en/cloud/paas/application-integration/training.html – Official training hub with tutorials, videos, and LiveLabs.
- docs.oracle.com/en/cloud/paas/application-integration/whats-new/ – What's New releases and feature updates.
- docs.oracle.com/en/cloud/paas/application-integration/videos.html – Official Oracle Integration video library.

■ **Tip:** Combine *BEENUM LEARNING* courses with official Oracle documentation for a well-rounded learning experience. The courses provide hands-on guidance while Oracle docs serve as comprehensive reference material.

9. Suggested Practice Projects

Build these projects to solidify your knowledge and create a portfolio that showcases your integration expertise:

1. ERP Cloud Invoice Import Automation

Build an FBDI-based bulk import integration for invoices with error handling, file staging, and callback notifications.

2. HCM New Hire Data Synchronization

Create a scheduled integration to synchronize new hire data from an external HR system to Oracle HCM Cloud using HDL imports.

3. Multi-System Order Processing

Design an event-driven integration across Oracle ERP, CRM, and a warehouse system using the pub-sub event framework.

4. B2B Trading Partner Integration

Implement an EDI document exchange integration with a trading partner, including inbound/outbound document processing.

5. Expense Approval Workflow with RPA

Build a process automation application for expense approvals combined with an RPA robot for automated data entry into a legacy system.

■ **Tip:** Start with simple integrations and progressively build complexity. Each project teaches different OIC capabilities – from basic orchestration to enterprise ERP integration with RPA. Document your work for your professional portfolio.

10. Tips for Success

1. Follow a Structured Course

Start with BEENUM LEARNING courses on Udemy for a step-by-step, hands-on approach to mastering OIC 3.

2. Practice Daily

Consistency is key. Use the OCI free tier to provision your own OIC instance and experiment with integrations daily.

3. Use Official Documentation

Refer to docs.oracle.com for the most up-to-date and comprehensive reference material on OIC 3.

4. Master the Data Mapper

The Data Mapper is central to all integrations and accounts for a significant portion of the certification exam. Practice XSLT transformations.

5. Aim for the Certification

The OCI Application Integration Professional Certification validates your skills and adds significant value to your career.

6. Learn Projects and RBAC Early

Projects are fundamental to OIC 3. Understand how to organize integrations, connections, and lookups within projects from the start.

7. Learn Incrementally

Don't try to learn everything at once. Follow the phased learning path – each phase builds on the previous one.

8. Stay Updated

Oracle releases monthly updates to OIC 3. Follow BEENUM LEARNING on YouTube and the Oracle What's New page for the latest features.

9. Understand Integration Patterns

Know when to use App-Driven vs Scheduled vs Event-based integrations. Pattern selection is critical for real-world and exam success.

10. Document Your Learning

Maintain notes, code snippets, mapper configurations, and lessons learned. This reference library will be invaluable throughout your career.

Best of luck on your Oracle Integration Cloud learning journey! ■

"Integration is the backbone of digital transformation – master it, and you master the enterprise."
