

Oracle Fusion AI Agent Studio – Advanced Learning Path (with Workflow, Agent Teams & Agentic Apps)

Overview

This enhanced roadmap includes advanced enterprise concepts like Workflow Agents, Agent Teams, and Agentic Applications to help developers build scalable, production-ready AI solutions in Oracle Fusion.

Phase 1: Foundations (Week 1)

Core prerequisites before AI Agent Studio.

- 1 Oracle Fusion basics
- 2 REST APIs & JSON
- 3 Intro to AI, LLMs, tokens
- 4 Basic JavaScript

Phase 2: AI Agent Studio Basics (Week 2)

Start building agents.

- 1 Create basic AI agents
- 2 Prompt-based instructions
- 3 Input/output handling
- 4 Testing responses

Phase 3: Prompt Engineering (Week 3)

Control agent intelligence.

- 1 Dynamic prompts
- 2 Role-based prompting
- 3 Reusable prompt templates
- 4 Debugging outputs

Phase 4: Core Agent Development (Week 4)

Build functional agents.

- 1 REST API integration
- 2 Business Objects usage
- 3 Data transformation
- 4 Conditional logic

Phase 5: Workflow Agents (Week 5)

Automate business processes.

- 1 Understand workflow-driven agents
- 2 Trigger agents via business events
- 3 Integrate approvals & workflows
- 4 Use agents in Oracle Fusion processes
- 5 Design event-based automation

Phase 6: Integration & Data (Week 6)

Enterprise connectivity.

- 1 BIP report integration (SOAP)
- 2 External REST services
- 3 Authentication (OAuth/Basic)
- 4 Error handling strategies

Phase 7: Agent Teams (Week 7)

Multi-agent collaboration.

- 1 Design agent teams for complex tasks
- 2 Assign roles (data agent, UI agent, workflow agent)
- 3 Orchestrate multi-step processing
- 4 Pass context between agents
- 5 Optimize collaboration logic

Phase 8: Agentic Applications (Week 8)

Build full AI-driven apps.

- 1 Design end-to-end agentic solutions
- 2 Combine UI + agents + integrations
- 3 Build autonomous decision systems
- 4 Implement user interaction loops
- 5 Deploy scalable AI applications

Phase 9: UI Integration (Week 9)

User-facing AI apps.

- 1 Chat-based UI design
- 2 HTML response formatting
- 3 Loading indicators
- 4 Oracle Visual Builder integration

Phase 10: Monitoring & Evaluation (Week 10)

Production readiness.

- 1 Monitor logs (tokens, latency)
- 2 Evaluate agent performance
- 3 Create test suites
- 4 Optimize accuracy

Capstone Projects

Real-world implementation.

- 1 Workflow approval automation agent
- 2 Multi-agent BIP reporting system
- 3 Enterprise AI assistant with agent teams
- 4 Full agentic HR/Finance application

Final Outcome

By completing this path, you will be able to design, build, and deploy enterprise-grade AI solutions using workflow agents, agent teams, and agentic architectures in Oracle Fusion.
