1. Introduction to Oracle Fusion AI Agent Studio

Oracle AI Agent Studio is a design-time environment within Oracle Fusion Cloud Applications that empowers you to create, configure, validate, and deploy AI agents to meet your organization's needs. Fully integrated into Oracle Fusion Cloud (ERP, HCM, SCM, CX), it provides secure and seamless access to the knowledge stores, tools, and APIs of Fusion Applications. Launched in September 2025 (Release 25C), Agent Studio has received major updates in 25D, 26A, and 26B — now featuring workflow agents, agentic applications builder, MCP support, and the AI Agent Marketplace.

Key Capabilities

- **Agent Template Libraries** – Use prebuilt templates and natural language prompts to create or fine-tune agents for common business scenarios.
- **Agent Team Orchestration** – Configure multiple agents to collaborate on multi-step processes with human approvals.
- **Agent Extensibility** – Extend existing Fusion Cloud agents with new data sources, prompts, and APIs.
- **Native Fusion Integration** – Direct access to APIs, tools, security, and business logic of Fusion Applications.
- **Third-Party System Integration** – Connect with external systems via External REST and MCP tools.
- **Trust & Security Framework** – Automatically applies Fusion security, policies, and role-based access controls.
- **Validation & Testing Tools** – Built-in tools for verifying AI-driven flows before deployment.
- **AI Agent Marketplace** – 100+ partner-built, Oracle-certified agents (Accenture, Deloitte, IBM, etc.).
- **Agentic Applications Builder (26B)** – Build outcome-focused agentic apps using natural language.
- **Workflow Orchestration (26B)** – Multi-step, multi-agent execution with rules, logic, and human oversight.

Core Components

Component	Description
Agent Teams	Structured sequence of steps/actions — the deployable unit
Agents	LLM-powered entities: user-proxy, supervisor, specialist/utility
Tools	Business Object, Document/RAG, External REST, Email, Deep Link, Calculator, MCP, Connector, File Processor, User Session
Topics	Subject areas with instructions that set boundaries for agent conversations
Instructions	Natural language rules sent to the underlying LLM

Two Agent Design Patterns

- **Hierarchical (Supervisor) Agents** – LLM determines execution order at runtime; flexible for complex reasoning tasks.
- **Workflow Agents** – Deterministic, node-based, fixed sequence; ideal for compliance-sensitive, repeatable enterprise processes.

■ **Tip:** *AI Agent Studio is included **FREE** with Oracle Fusion Cloud Applications — no additional licensing required. Access it via **Navigator** → **Tools** → **AI Agent Studio**.*

2. Prerequisites

Before starting your AI Agent Studio journey, ensure you have the following foundational knowledge:

- **Oracle Fusion Cloud Access** – An active Fusion environment (ERP, HCM, SCM, or CX).
- **Fusion Functional Knowledge** – Understanding of at least one Oracle Fusion domain (Finance, HR, Supply Chain, or CX).
- **AI/ML Concepts** – Basic understanding of LLMs, RAG, prompts, and tokens.
- **REST APIs & JSON** – Familiarity with RESTful services and JSON data structures.
- **Business Process Workflows** – Understanding of enterprise workflows and approval processes.
- **Fusion Security** – Role-based access control (RBAC) in Oracle Fusion and profile options.
- **Prompt Engineering (optional)** – Helpful for crafting effective agent instructions and topics.

■ **Tip:** *If you're new to AI and LLM concepts, start with BEENUM LEARNING beginner courses on Udemy to build a solid foundation before diving into AI Agent Studio.*

3. Phase 1: Foundation (Weeks 1–2)

■■ PHASE 1: FOUNDATION • Weeks 1–2

Learning Objectives

- Understand why enterprise AI should be **built-in, not bolted on** (Fusion-native architecture).
- Navigate AI Agent Studio: **Navigator** → **Tools** → **AI Agent Studio**.
- Understand core components: **Agent Teams, Agents, Tools, Topics, Instructions**.
- Understand agent types: **User-proxy, Supervisor, Specialist/Utility** agents.
- Configure **access requirements**: security roles and profile options (ORA_ASE_SAS_INTEGRATION_ENABLED).
- Explore **delivered (seeded/OOTB) agent templates** across ERP, HCM, SCM, and CX.
- Deploy a **prebuilt agent template** (e.g., Personal and Employment Details Agent for HCM).
- Test agents using the **built-in debug/chat interface**.
- Browse the **AI Agent Marketplace** for partner-built agents.

Hands-On Activities

- Enable AI Agent Studio access in your Fusion environment (set profile options and roles).
- Deploy and test a seeded HCM agent (e.g., Career Planning Guide or Personal Details Agent).
- Explore the AI Agent Marketplace and browse partner-built agents.
- Test an OOTB agent using the Fusion AI Chat interface.

4. Phase 2: Building Hierarchical Agents (Weeks 3–5)

■ ■ PHASE 2: HIERARCHICAL AGENTS • Weeks 3–5

Learning Objectives

- Create **custom agents from scratch** using natural language prompts.
- Configure **Agent Tools**:
 - **Business Object Tool** – CRUD operations on Fusion business objects (via HTTP GET, POST, PATCH).
 - **Document Tool (RAG)** – Semantic search on uploaded documents (PDF, TXT, MD).
 - **External REST Tool** – Connect to external/third-party APIs.
 - **Email Tool** – Send emails via Fusion HCM Alert system.
 - **Deep Link Tool** – Navigate to specific Fusion application pages.
 - **Calculator Tool** – Perform mathematical calculations.
 - **MCP Tool (26A)** – Connect to external MCP-compliant servers.
 - **Runtime File Processor Tool** – Process files at runtime.
 - **User Session Tool** – Access user session context.
- Create **Topics** with detailed instructions for agent boundaries and constraints.
- Build **Agent Teams** with supervisor-worker patterns (hierarchical orchestration).
- Configure **multi-agent collaboration**: supervisor orchestrates specialist agents.
- Upload and process documents for **RAG-based agents**.
- Publish and deploy agents to the **Fusion AI Chat interface**.

Hands-On Activities

- Build a custom agent with Business Object and Document tools.
- Create a RAG-powered agent that answers questions from uploaded policy documents.
- Build a multi-agent team with supervisor and specialist agents.
- Deploy and test the agent in the Fusion AI Chat interface.

5. Phase 3: Workflow Agents & Advanced Features (Weeks 6–8)

■ PHASE 3: WORKFLOW AGENTS & ADVANCED • Weeks 6–8

Learning Objectives

- Understand **Workflow Agents vs Hierarchical Agents**: when to use each pattern.
- Build **Workflow Agents** with deterministic, node-based orchestration.
- Master **Workflow Node Types**:
 - **Code Node** – Data transformation and business logic.
 - **IF Condition Node** – Branching logic for decision-making.
 - **Business Object Function Node** – CRUD on Fusion objects.
 - **LLM Node** – AI-powered reasoning within workflows.
 - **Email Node / Email Trigger** – Send emails and process inbound email.
 - **Human Approval Node** – Human-in-the-loop approval steps.
 - **Agent Node** – Invoke reusable agents within workflows.
 - **Workflow Node** – Invoke reusable sub-workflows.
 - **Vector DB Read/Write** – Semantic search within workflows.
- Implement **Enterprise Collaboration (26A)** – Agents collaborating across business domains.
- Configure **Simplified RAG Agents (26A)** – Easier document-based agent creation.
- Use **Developer AI Assist (26A)** – AI-powered assistance for agent building.
- Build **Agentic Applications (26B)** – Multi-agent apps with displays, advisors, actions, communications.
- Use the **Edit in Playground (26B)** – Test, tune, and validate agents without full workflows.
- Add **Your Own LLM** – Bring your own large language model to Agent Studio.

Hands-On Activities

- Build a workflow agent for automated requisition processing with branching logic.
- Create a workflow with Human Approval Node for expense approval.
- Build an agentic application combining multiple specialized agents.
- Use the Playground (26B) to test and optimize agent prompts and node outputs.

6. Phase 4: Monitoring, Evaluation, Security & Deployment (Weeks 9–11)

■ PHASE 4: METRO, SECURITY & DEPLOYMENT • Weeks 9–11

Learning Objectives

- Implement **METRO**: Monitoring, Evaluation, and Traceability framework.
- Monitor agent execution, interpret **logs, metrics, and dashboards**.
- Create **Evaluation Sets** with test input and reference answers for offline testing.
- Compare **evaluation runs** to track quality improvements over time.
- Measure agent **response quality, safety, efficiency, and latency** metrics.
- Implement **Security**: role-based access control (RBAC) for agents and interactions.
- Apply **authentication, authorization, and data protection** controls.
- Understand Oracle's **21-point inspection process** for marketplace agents.
- Implement **ROI measurement** for deployed agents using built-in observability tools.
- Manage **agent lifecycle**: development → testing → staging → production.
- Implement **Content Intelligence and Contextual Memory (26B)** for smarter agents.
- Integrate agents with **Oracle Redwood Pages** to extend the Redwood UI with AI.
- Connect agents to **Oracle Autonomous Database via MCP Server**.

Hands-On Activities

- Create evaluation sets and run agent quality assessments.
- Configure RBAC for agent access across departments.
- Implement monitoring dashboards for production agents.
- Integrate an AI agent with a Redwood Page for enhanced UX.

7. Certification Path

Oracle offers an official certification to validate your expertise in AI Agent Studio.

Oracle Fusion AI Agent Studio Foundations Associate Certification

Exam Code: **1Z0-1145-1**

This certification validates your foundational skills in identifying and describing the core capabilities of Oracle AI Agent Studio, evaluating, testing, monitoring, configuring, customizing, and deploying AI agents within Oracle Fusion Cloud Applications.

Detail	Value
Exam Code	1Z0-1145-1
Format	Multiple Choice
Number of Questions	40
Duration	60 Minutes
Passing Score	65%
Price	FREE
Validated Against	Release 25B

Exam Topics

Exam Topic
Understanding Core Capabilities of AI Agent Studio for Fusion Applications
Evaluating and Testing Agents
Monitoring Agents
Configuring and Deploying Agents
Customizing Out-of-the-Box (OOTB) Agents
Implementing Security

■ docs.oracle.com/en/cloud/saas/fusion-ai/aiaas/overview.html – Official AI Agent Studio Documentation

■ **Tip:** This is a **FREE certification exam** — one of the few Oracle certifications with no exam fee! Take advantage of it to validate your AI Agent Studio skills and earn a globally recognized credential.

8. Recommended Resources

■ Learning Courses

- **BEENUM LEARNING – Udemy** – Comprehensive Oracle Fusion AI Agent Studio courses covering beginner to advanced topics.
- **BEENUM LEARNING – YouTube** – Free tutorials, walkthroughs, tips, and real-world AI agent demonstrations.

■ Official Oracle Documentation

- docs.oracle.com/en/cloud/saas/fusion-ai/aiaas/overview.html – AI Agent Studio Overview.
- docs.oracle.com/en/cloud/saas/fusion-ai/26b/aiaas/key-capabilities.html – Key Capabilities (26B).
- docs.oracle.com/en/cloud/saas/fusion-ai/aiaas/components-of-ai-agent-studio.html – Components Guide.
- docs.oracle.com/en/cloud/saas/fusion-ai/26b/aiaas/how-do-i-use-ai-agent-studio.pdf – Complete Developer Guide (PDF).

■ **Tip:** Combine BEENUM LEARNING courses with official Oracle documentation for a well-rounded learning experience. The courses provide hands-on guidance while Oracle docs serve as comprehensive reference material.

9. Suggested Practice Projects

Build these projects to solidify your knowledge and create a portfolio showcasing your AI Agent Studio expertise:

1. HR Policy Assistant Agent

Build a RAG-based agent that answers employee questions from uploaded HR policy documents (PDF/TXT). Use Document Tool and Topics.

2. Invoice Processing Automation

Create a workflow agent that ingests invoices, validates against POs, checks compliance, and routes for approval using the Human Approval Node.

3. Recruitment Screening Agent

Build a multi-agent team: resume screener + interview scheduler + salary calculator + offer generator using hierarchical orchestration.

4. Supply Chain Advisor

Create an agent that queries procurement business objects, checks supplier compliance, and recommends next-best actions.

5. Cross-Domain Agentic Application

Build an agentic app (26B) combining an ERP finance agent + HCM employee agent + SCM inventory agent for unified enterprise intelligence.

■ **Tip:** Start with simple single-agent projects and progressively build multi-agent teams and workflow agents. Each project teaches different AI Agent Studio capabilities. Document your work for your professional portfolio.

10. Tips for Success

1. Start with Seeded Templates

Deploy OOTB agents first to understand the platform's capabilities before building custom agents from scratch.

2. Master Prompt Engineering

Clear, specific instructions in system prompts and topics are key to agent quality. Invest time in crafting effective prompts.

3. Follow BEENUM LEARNING

Use BEENUM LEARNING courses on Udemy and YouTube for structured, hands-on guidance through your learning journey.

4. Use Official Documentation

Refer to docs.oracle.com for the complete developer guide, components reference, and release-specific feature documentation.

5. Understand Both Agent Patterns

Know when to use Hierarchical (flexible, LLM-driven) vs Workflow (deterministic, compliance-safe) agents. Pattern selection is critical.

6. Take the FREE Certification

The 1Z0-1145-1 exam is FREE — one of the few Oracle certifications with no exam fee. Validate your skills and earn a globally recognized credential.

7. Learn Incrementally

Don't try to learn everything at once. Follow the phased learning path — each phase builds on the previous one.

8. Practice in Playground (26B)

Use the Edit in Playground feature to test, tune, and validate agents without deploying full workflows. It dramatically speeds up iteration.

9. Stay Updated

Oracle releases quarterly updates (25C, 25D, 26A, 26B). Follow BEENUM LEARNING on YouTube and Oracle What's New for the latest features.

10. Document Your Learning

Maintain notes, prompt templates, agent configurations, and lessons learned. This reference library will be invaluable throughout your career.

Best of luck on your Oracle Fusion AI Agent Studio learning journey! ■

"The future of enterprise AI is built in, not bolted on — master it, and you master the intelligent enterprise."
